| 25. Industrial Hygiene; Sociology | 50. Zoology |

Privately published under the auspices of the

EXECUTIVE COMMITTEE OF THE

FRIENDS OF THE ARMY MEDICAL LIBRARY

Washington, D. C.

INDEX TO VOLUME 1

The preparation of an index to Volume 1 of the Current List in accordance with the suggestion mentioned in the December 10 (No.50) issue of 1941 has been pursued during the past several months and is now almost completed. Before having it printed, however, it is necessary to ascertain how many of those who subscribed to Volume 1 have kept their copies and wish to receive this index in order to complete their files. For this purpose a postcard is enclosed herewith on which those who desire a copy of the index are asked to signify their wishes. On the basis of the responses received, the decision in regard to the number of copies of the index to be printed will be made.

As explained previously the index is not to the entire contents of Volume 1, but only to the titles not recorded in the Quarterly Cumulative Index Medicus. It will therefore serve principally as a supplement to the Index Medicus for locating papers in less known Medical journals and in periodicals related to allied fields of medicine and surgery such as dentistry, public health, nursing, popular medical information, veterinary medicine, etc.

For this reason it is possible that many of those who entered their subscriptions too late to receive a complete set of the back numbers may be interested in having the index as a sort of supplementary tool for searching the medical literature. Although the financial resources of the Current List are still not on as secure a basis as might be desired, it has been decided to distribute the index to subscribers gratis in the hope that it will increase the value of the Current List by permitting an evermore general and complete use of the medical literature.

The index, like the Current List itself, is in the nature of an experiment intended to develop more economical means for acquainting research workers with the literature and distributing to them by microfilms that part of it they cannot otherwise obtain. The many expressions of approval which have been received encourage us to believe that this experiment is proving successful and deserves the continued efforts needed to bring it to a higher degree of usefulness.

(continued on inside back cover)

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at \$1.00 per year. Address communications to:

In the condensed form of the index to volume 1, which is now nearly completed, the page references to titles pertaining to a given subject have been collected and listed together, thus making it unnecessary to repeat the title of each paper. By this means a large number of closely related references are brought together in a very small space under appropriate subject headings. The inconvenience, however, is that, to find the complete title, it is necessary to turn to the indicated page in the main body of the volume. Yet, this inconvenience is largely offset by the savings in cost of printing and by the advantage of having the pertinent references to a given subject brought closely together.

This arrangement of the index makes it more desirable that each volume of the Current List be complete in itself, but since 52 numbers and an index form a rather heavy and bulky volume, it has been decided to divide the issues for one year into two volumes. Volume 2 of the Current List will, therefore, be for the period from January 1 to June 30, 1942, and each succeeding volume for a period of six months. It is expected that the future indexes will be to all titles published in the Current List, and not only just to titles not covered by the Quarterly Cumulative Index Medicus. Although this will require considerably more work, it is hoped that each index can be issued within a few months after the completion of its corresponding volume.

A.S.
